

## Deploying LauncherSettings.xml using Group Policy

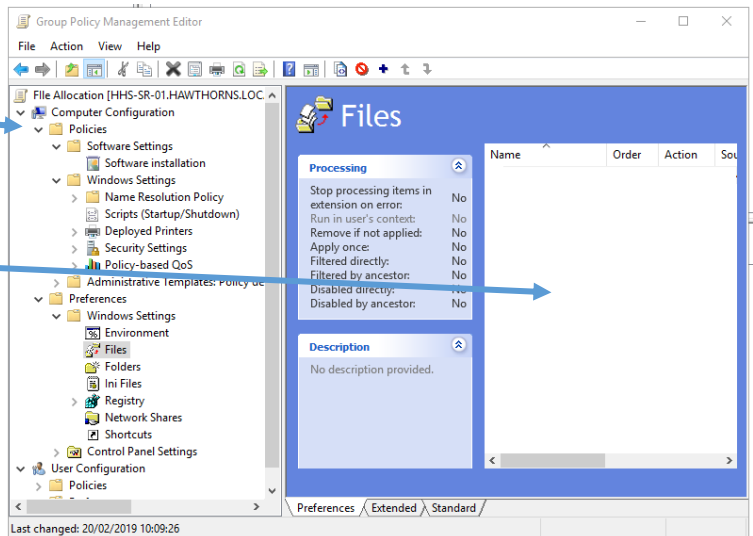

- 1) Right-click the Domain or OU and select New Group Policy Object
- 2) Name the new GPO 'File Allocation' (or similar) and click OK

- 3) Right-click the File Allocation in the list and select Edit

- 4) Expand Policies > Preferences > Windows Settings and select Files

- 5) Right-click in the white space and select New

- 6) Set the Action to Update

- 7) Select the Source file  
e.g. C:\4Matrix\Client Files\LauncherSettings.xml

- 8) Type the client Destination file path and name e.g. C:\Program Files (x86)\4Matrix\LauncherSettings.xml

- 9) Click OK and return to the main GP Management editor. To deploy, restart the clients or force a GP update
